

*Amendments to the Claims*

The listing of claims will replace all prior versions, and listings of claims in the application.

1. (Currently Amended) A series resistance self-regulating heating cable comprising:

a heating element extending longitudinally along the cable, wherein the heating element comprises a semi-conductor having a positive temperature coefficient[[],]; and ~~the cable further comprises~~

at least one conductive terminal coupled to an outside surface of the cable, electronically connected to the heating element, and located at an end of the cable.

2-3 (Cancelled)

4. (Previously Presented) The heating cable as claimed in claim 1, wherein said semi-conductor comprises a polymer.

5. (Previously Presented) The heating cable as claimed in claim 1, wherein said semi-conductor comprises a high density polyethylene matrix including carbon.

6. (Previously Presented) The heating cable as claimed in claim 1, the at least one conductive terminal being in electrical contact with the heating element via a conductive paste.

7. (Previously Presented) The heating cable as claimed in claim 6, wherein said conductive paste comprises silver.

8. (Currently Amended) A heating device, comprising:  
a series resistance self-regulating heating cable including a heating element extending longitudinally along the cable, wherein the heating element includes:  
a semi-conductor having a positive temperature coefficient[[],];  
~~and the cable further comprises~~  
at least one conductive terminal coupled to an outside surface of the cable, electronically connected to the heating element, and located at an end of the cable.

9. (Previously Presented) The heating device as claimed in claim 8, wherein said heating device is a car seat heater.

10. (Currently Amended) A method of manufacturing a series resistance self-regulating heating cable, comprising:  
extending a heating element longitudinally along the cable, wherein the heating element includes:  
a semi-conductor having a positive temperature coefficient[[],]; ~~and the cable further comprises~~  
at least one conductive terminal coupled to an outside surface of the cable, electronically connected to the heating element, and located at an end of the cable.

11. (Currently Amended) A method of manufacturing a heating device, comprising:

producing a series resistance self-regulating heating cable having a heating element extending longitudinally along the cable, wherein the heating element includes:

a semi-conductor having a positive temperature coefficient[[,]];

and ~~the cable further comprises~~

at least one conductive terminal coupled to an outside surface of the cable, electronically connected to the heating element, and located at an end of the cable.

12-15. (Cancelled)
